Chromebook

- Connecting a Chromebook to the eduSTAR Wireless Network

Connecting a Chromebook to the eduSTAR Wireless Network

Follow these steps to connect your Chromebook to the **eduSTAR** Wi-Fi network.

Step 1: Select the Network

1. Click the Wi-Fi icon in the bottom-right corner of your Chromebook screen.
2. Select the **"eduSTAR"** network from the available networks.

Step 2: Configure Network Settings

1. Change the **EAP method** to: **PEAP**
2. Change **EAP Phase 2 authentication** to: **MSCHAPv2**
3. Change **Server CA Certificate** to: **Do not check**
4. In the **Identity** field, type your @schools username.
5. In the **Password** field, type your @schools password.
6. Leave **Anonymous Identity** blank.
7. Ensure **Save Identity and Password** is checked.

Step 3: Connect

1. Press **Connect**.
2. Accept and continue through **Google’s Terms of Service** if prompted.

Step 4: Verify and Configure Proxy (if required)

1. Navigate to the bottom-right corner of the screen and click the Wi-Fi icon.
2. Click the **gear icon** next to the eduSTAR network (now connected).
3. The **Proxy options** should appear in the popup dialog for configuration if needed.

> **Tip:** If you experience connectivity issues, restart your Chromebook and repeat the steps above. Contact the IT department if problems persist.
